If and when the time comes that I can no longer participate in decision-making regarding my own health and medical treatment, this directive should be treated as the final expression of my wishes.

Relevant Personal Values & Health Background:

Personal values and goals: *I value mental clarity and time with my family above prolonging pain.*

I request that all concerned (including my designated healthcare representative(s), my treating team, and the others involved) must treat my wishes in this document as the primary basis for any decision regarding my medical treatment, particularly decisions relating to life-sustaining treatment.

ADVANCE MEDICAL DIRECTIVE

Section 2: Directions relating to life-sustaining treatment

In situations where my treating physician or medical team have determined that:

• There is no reasonable medical probability of recovery from a terminal condition, end-stage condition [1], or vegetative state [2], and

• Any further medical intervention or course of treatment would only serve the purpose of artificially prolonging the process of dying.

I direct that any life-prolonging medical procedure/treatment be withheld or withdrawn, and the course of natural death be permitted, in accordance with the specific directives set forth below:

Medical Intervention / Treatment	Patient Preference & Explanation	Directive Status
1. Cardio-pulmonary resuscitation (CPR)	Directs that cardiopulmonary resuscitation (CPR) be withheld or withdrawn; permit natural death.	**WITHHOLD / WITHDRAW**
2. Mechanical Ventilation (Artificial Life Support)	Directs withholding or withdrawal of invasive mechanical ventilation / artificial life support.	**WITHHOLD / WITHDRAW**
3. Dialysis (Renal Replacement Therapy)	Directs withholding or withdrawal of renal dialysis in end-stage or terminal condition.	**WITHHOLD / WITHDRAW**
4. Chemotherapy (Cancer Therapy)	Directs withholding or cessation of chemotherapy aimed solely at prolonging active dying.	**WITHHOLD / WITHDRAW**

7. Artificial Hydration (IV / Tube Fluids)	Directs withholding of invasive IV fluids/meds, excluding those needed for comfort/pain relief.	**WITHHOLD / WITHDRAW**
8. Artificial Nutrition (Feeding Tubes)	Directs withholding/withdrawal of artificial feeding tubes if only artificially prolonging dying.	**WITHHOLD / WITHDRAW**

Statutory & Clinical Definitions:

[1] *'End-stage condition'* means an irreversible condition caused by injury, disease, or illness resulting in progressively severe and permanent deterioration, where, to a reasonable degree of medical probability, treatment would be ineffective.

[2] *'Vegetative state'* is one where a person is awake but shows no signs of awareness (persisting beyond clinical thresholds established by authoritative medical bodies).

Comfort Care & Pain Alleviation Directive: Even when life-sustaining treatment is withheld or withdrawn, I explicitly direct the administration of medication and performance of medical procedures for providing me with comfort care or to alleviate suffering in the form of pain, distress, or mental confusion (or to facilitate organ or body donation).

Specific pain management directives: Administer maximum palliative analgesia.
